DETAILED ACTION

Specification

The abstract of the disclosure is objected to because the length should be limited to 150 words. Correction is required. See MPEP § 608.01(b).

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-11 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 1-11 make claim to "A test support program executed by a computer", thereby claiming functional descriptive material. However, a computer readable medium is not claimed. The scope of claims 1-11 is merely a set of instructions capable of being executed by a computer and is not a process, thus describing non-statutory descriptive material (see MPEP 2106 IV B. 1. (a))

Allowable Subject Matter

Claims 12-14 are allowed.

The following is an examiner's statement of reasons for allowance:

The independent claim 12 recites, "(d) generating a post-update test pattern for an operational test of said post-update operation description acquired in step (a), by inheriting at least a portion of said pre-update test pattern extracted in step (c)". This feature in combination with the remaining claimed structure avoids the prior art of record.

The independent claim 13 recites, "a post-update test-pattern generation unit which generates a post-update test pattern for an operational test of said post-update operation description acquired by said post-update operation-description acquisition unit, by inheriting at least a portion of said pre-update test pattern extracted by said pre-update test-pattern extraction unit". This feature in combination with the remaining claimed structure avoids the prior art of record.

The independent claim 14 recites, "generating a post-update test pattern for an operational test of said post-update operation description acquired in step (a) by inheriting at least a portion of said pre-update test pattern extracted in step (c)". This feature in combination with the remaining claimed structure avoids the prior art of record.

U.S. Patents 6,502,210 to Edwards and 6,763,490 to Krech, Jr. et al disclose similar subject matter, but do not disclose claimed features as described above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2863

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
